

Company Overview:

Based in California's Silicon Valley, **WebShar** is dedicated to helping innovative teams transform their ideas into reality. We offer cutting-edge software development consulting services to companies across the globe, leveraging years of technical expertise and industry experience. WebShar's team excels in modern software development methodologies, empowering organizations to create state-of-the-art software solutions tailored to their needs.

Job Title- Senior Node.js Developer

Job Description:

We are seeking a **Senior Node.js Developer** with a passion for building high-performance mobile applications on both iOS and Android platforms. You will be responsible for architecting, developing, and maintaining these applications, as well as collaborating with other teams to ensure a seamless integration of product infrastructure. This role requires a highly collaborative individual who is detail-oriented and committed to delivering exceptional products.

Location: Remote

Job Type: Full-time

Experience: 5-6 Years

Key Duties and Responsibilities:

- Lead and oversee software projects, serving as a **Technical Leader** or **Lead Software Engineer**.
- Take full responsibility for product development, ensuring the delivery of high-quality solutions within deadlines.
- Design and develop solutions by analyzing problems using **Node.js**, **Express.js**, or other relevant languages.
- Knowledge of **Go** and experience with **Go-based** solutions.
- Familiarity with **GraphQL** and its implementation in different environments.
- Adhere to coding standards, software development methodologies, and release processes.
- Utilize tools like configuration management systems, build processes, and debuggers.
- Create and implement designs for new functionalities and maintain existing features.
- Add value by participating in peer code reviews and providing constructive feedback.
- Provide reliable solutions to complex problems through sound technical analysis and problem-solving.
- Perform **root cause analysis** and outline corrective actions when necessary.
- Mentor and guide junior software engineers, fostering a collaborative and growth-oriented environment.
- Demonstrate a strong sense of urgency, commitment, and focus on priorities to ensure timely delivery of solutions.
- Review technical documentation, manuals, and brochures for accuracy.
- Collaborate in product definition activities, including **feature analysis** and **system trade-offs**.

Requirements:

- 5-6 years of relevant work experience.
- **BS** or higher degree in **Computer Science** or related fields.

What We Offer:

- Competitive salary and benefits package.
- A collaborative environment with opportunities for growth and career advancement.
- Chance to lead and mentor a talented team while working on impactful projects.
